

Mohan Gupta, University of Geneva / Michigan State University ( Fall 2015)

We arrived in Stockholm and immediately went to the Karolinska Institute (KI). Where we had an exciting, and rewarding discussion of the advantages quantitative and qualitative research and what how each can be used. Afterwards, we were shown around Stockholm by students in the biomedical club. This was refreshing to see KI's medical programs from multiple students' perspectives, instead of only program directors.

The other few days were as jam-packed as the first, from student presentations, to us eating our way around the city, interspersed with Fikas. The highlight for me, especially being a neuroscience major was seeing Linnaeus' first edition *Systema Naturae* next Darwin's *On the Origin of Species*. With everything being culminated in a delicious dinner and meeting many of the staff who helped everyone through their stay in Europe so far. I appreciate the opportunity to meet the rest of the EuroScholars students and hope all of us will keep in future contact.
